PROFILE SUMMARY

Aspiring **Cloud & DevOps Engineer** with hands-on experience in **AWS** infrastructure, **Linux** server administration, and **Docker** containerization. Currently pursuing BCA in Cyber Security with a strong focus on building scalable, secure cloud deployments and automation-driven workflows. Proven ability to deploy production-grade applications end-to-end — from local development to public cloud infrastructure.

EDUCATION

Maya Devi University *Dehradun*
Bachelor of Computer Applications (BCA) – Cyber Security *2024* –2027

- Relevant Coursework: Cloud Computing, Network Security, Operating Systems, Database Management, Web Technologies
- Gained practical experience in **AWS** cloud architecture, **Linux** administration

SKILLS

Technical skills:

Cloud & Infrastructure: AWS (EC2, S3, IAM, Route 53, CloudWatch, VPC, Security Groups), **Linux** (Ubuntu, CentOS), **Nginx**

DevOps & VCS: Git, GitHub, Docker, shell Scripting, Python scripting

Security & Networking: Firewall Configuration, DNS Management, SSL/TLS

PROJECTS

Portfolio Website — AWS Cloud Deployment (2026) 🌐 Live: bijaychand.me

- Deployed a React/Vite application on AWS EC2, configuring Linux server, Node.js runtime, and Nginx as a reverse proxy with custom domain routing via AWS Route 53 and hardened Security Group rules
- Implemented SSL/TLS encryption for HTTPS enforcement and automated the deployment lifecycle using Git and GitHub, enabling zero-downtime updates and seamless continuous delivery
- Gained hands-on experience in cloud infrastructure, DNS configuration, server administration, and end-to-end DevOps practices on a live production environment

Multi-Tier Web Application - Docker Deployment(2026)

https://github.com/bijaychand24-code/Multi-Tier_Web_Application

- Architected a containerized multi-tier application using Docker Compose, orchestrating isolated services for Django backend, MySQL database, and Nginx reverse proxy on a single host
- Secured credentials via environment variable injection, maintained persistent data with Docker named volumes, and configured Nginx on port 80 for production-ready request forwarding
- Managed the full container lifecycle — build, migrate, run, and teardown — demonstrating real-world understanding of service isolation, inter-container networking, and microservices architecture

Certification

- AWS Cloud Practitioner Essentials
- Bootcamp on Windows Forensic Analysis
